

Enhanced clinical efficiency in radiology with protocol optimization and right choice of iodinated contrast media

LIVE WEBINAR: 25 May 2022 (Wed) 17:00-18:00 (HK Time)

Abstract

This webinar will cover 2 parts on iodinated contrast media application:

1. Speaker with radiographer background will first share things that you need to know when working with iodinated contrast media, includes factors that affect contrast enhancement e.g. Total Iodine Load (TIL), Iodine Delivery Rate (IDR), Concentration Viscosity Ratio (CVR), tube voltage, contrast injection flow rate adjustment by catheter size and personalized injection Smart Protocols.
2. Next, a speaker with medical background will review the details of currently available iodinated contrast in the market, share the updated International guidelines on contrast usage, and discuss some points to bear in mind while choosing the right iodinated contrast for your patient.
